

Discontinuation Notice – 200GX

After reviewing the product portfolio whilst rebranding all our products to Greenlee Communications, the “200GX” Pair Tracing Probe (50605577) has reached the end of its life. To improve efficiency and to be able to offer you the best value and featured products we have chosen to replace this with the 200EP-G, which is produced in far greater numbers, in all existing kits. The 200EP-G adds the following features for no additional cost to you: headset socket & flashlight near the probe tip.

Therefore, when you receive the following kits, 711K (example of new kit shown alongside), and shortly AT8LK once stocks are exhausted, these will include 200EP-G in place of the 200GX probe.

The “bulk” 711K-GB kit was rebranded a few months back. This is the version supplied in a box rather than the “retail” version.

If you still wish to have a probe with the more modern shape of the 200GX but with even more features, then please consider the 500XP which is also water and crush resistant and provides additional noise filtering modes and acAlert™.

As we are re-branding products to Greenlee Communications, please remember that we are adding “-G” to many of the model numbers. Orders for old style parts will be adjusted automatically where possible.

Regards,

Mark Govier
